ALLINWOOD

OUR STORY

Crafted by Nature. Perfected by ALLINWOOD.

ALLINWOOD's journey began in 2004, deep within Europe's forests, where our craft took root. Starting with raw timber, we honed our knowledge at every stage — from sourcing and milling to construction and finishing. This hands-on experience became our signature: an unmatched understanding of wood behavior, quality, and timeless design.

For over two decades, we've transformed nature's raw beauty into precision-crafted surfaces. Specializing in engineered European White Oak flooring and wooden panels, our products are made in Europe and finished with natural, VOC-free oils — offering both sustainability and sophistication.

In 2024, we took our commitment to innovation even further by developing a new line of engineered thermally modified wood. This technology enhances the wood's natural durability, dimensional stability, and resistance to moisture and insects — without the use of chemicals. It opens the door to our next chapter: premium hardwood siding and decking, designed to perform beautifully in outdoor environments while maintaining the refined look that defines ALLINWOOD.

From boutique hotels to luxury homes, our products elevate every interior — and now, exteriors — with quiet elegance and enduring performance. We don't just supply hardwood — we embody it. Every plank reflects our legacy of craftsmanship and commitment to excellence.

OUR CHRONICLE

Crafted by Nature. Perfected by ALLINWOOD.

2004 — The Origin of Craft

In the heart of the forest, our story began. We immersed ourselves in the language of timber — grain, structure, and rhythm. Every log was a new lesson in precision and potential.

2008 — Craft Becomes Legacy

We grew into full-scale production, mastering each detail from sawmill to final finish. Our work was guided by European values: durability, refinement, and design integrity.

2012 — Austrian Precision, European Soul

Our own facility opened in Austria — a region steeped in woodworking heritage. Here, tradition meets modern engineering to create the signature cores and natural finishes that define our engineered hardwood.

2022 — European Craftsmanship Meets American Design

With operations launched in Elgin, Illinois, we made our products accessible to North America. Faster service. Local support. Same European excellence.

2024 — Expanding Horizons with Thermal Innovation

We introduced our line of engineered thermally modified wood, engineered for outdoor applications like hardwood siding and decking. By enhancing durability and weather resistance naturally, we are now bringing ALLINWOOD quality outdoors — with materials designed to age gracefully and perform beautifully.

Today — The ALLINWOOD Standard

We continue to shape both interiors and exteriors with quiet luxury — curating floors, panels, siding, and decking that speak of heritage, elegance, and authenticity. With over 20 years of mastery behind us, we don't just make wood products. We define what they can become.

Allinwood USA Flooring Sophisticated design at affordable prices

Discover timeless elegance with **Allinwood USA Flooring**. Our premium European hardwood collections blend sophisticated design with unmatched craftsmanship, bringing warmth and character to every space. Crafted from carefully selected wood species, each plank showcases distinctive textures and enduring beauty that suits both contemporary and classic interiors.

At **Allinwood**, we offer an extensive range of finishes, sizes, and styles, ensuring the perfect flooring solution for every taste and budget. From luxurious wide planks to intricately detailed patterns, our hardwood flooring is designed to inspire and built to last. Create unforgettable spaces with **Allinwood Flooring**—where quality meets affordability and elegance meets durability.

Why Choose Allinwood USA

Exceptional European Craftsmanship

Our hardwood flooring is exclusively manufactured in Europe, where centuries of tradition and innovation converge to produce materials of uncompromising quality and distinction.

Sustainable Luxury

We prioritize your health and the planet. Allinwood floors are finished with eco-friendly, VOC-free products—delivering natural elegance without harmful emissions or concealed chemicals.

Tailored Versatility

From grand commercial spaces to refined residential interiors, our collections offer bespoke options in species, finish, and dimension—crafted to complement any design vision with elegance and precision.

European Excellence, Local Presence

Based in the United States, Allinwood USA provides the advantage of responsive, knowledgeable local support, while delivering the timeless sophistication of true European flooring.

Why We Use Eco-Friendly Oil

A Safer, Smarter Alternative to Varnish

Allinwood USA. Naturally luxurious. Exceptionally smart.

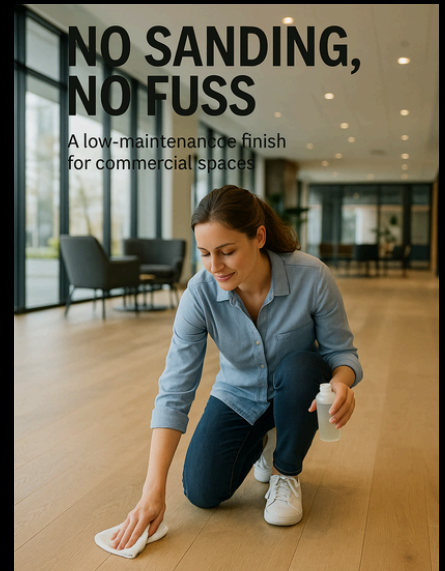

At Allinwood USA, we believe luxury should never come at the cost of your health—or your floor’s long-term performance. That’s why we exclusively use Rubio Monocoat Oil an advanced, plant-based oil finish that offers true sustainability, durability, and zero compromise.

✓ **Healthier Living Environments**

Many competitors advertise their products as “eco-friendly,” yet still finish their flooring with traditional lacquers—which contain formaldehyde, solvents, and other VOCs. These chemical coatings continue to off-gas for months and pose real health risks, especially for children, pets, and allergy-sensitive individuals. Rubio Monocoat Oil is truly eco-friendly and VOC-free, from day one. It’s 100% safe, non-toxic, and ideal for creating cleaner, healthier indoor spaces.

✓ **Effortless Beauty & Maintenance**

Unlike varnish, Rubio Monocoat oil bonds at a molecular level with the wood, forming a durable yet breathable finish. Small scuffs or everyday stains? Simply clean and if needed reapply without sanding—no dust, no downtime, no toxic fumes.

✓ **Smart Touch-Up System**

Maintain your floor's pristine appearance with user-friendly restoration kits — perfect for busy households and commercial spaces alike. User-friendly restoration kits allow for localized spot treatments, so you don't have to refinish the entire floor. It's a smarter, low-maintenance way to keep your space looking flawless.

✓ **Preserve Your Investment**

Traditional lacquered floors may look good initially — but that finish becomes a barrier. Not only is it not VOC-free, it seals off the wood, making even small updates difficult. If you want to refresh or change the color, you'll need to sand off the entire top layer, reducing the lifespan of your flooring. And every resand brings you closer to a costly replacement. With Rubio Monocoat Oil, you preserve the top layer. There's no lacquer to remove, so renewing or changing the color requires no sanding. Simply clean the surface and apply a fresh coat — preserving your floor's structure and beauty for years to come.

✓ **Naturally Luxurious**

Rubio Monocoat Oil enhances the wood's natural texture and tone — bringing out rich grains and subtle variations that lacquers often mask. It's authentic beauty, elevated.

GRADES

When it comes to deciding which wood grade is best for your wooden flooring, there are six grades of wood to choose from. Each grade gives a slightly different look. The grades are called:

- 1.Prime or A
- 2.Select or AB
- 3.Natural or ABC
- 4.Natural Rustic or ABCD
5. Wild Rustic or CD
- 6.Character or DE

In order to help you make a choice of wood grading for your hardwood flooring here are some of the characteristic of each grade:

GRADE	DESCRIPTION	KNOTS	SAPWOOD	COLOR VARIATION
Prime Grade or A	Highest grade with uniform appearance and clear, healthy single knots with a maximum diameter of 10mm, dead single knots >5mm. No open defects, less color variation. No sapwood and cracks allowed.	Very few, small and unobtrusive knots >5mm	Not allowed	Minimal, but still present
Select Grade or AB	Clear, healthy and dead single knots with a diameter > 15mm. No open defects and cracks not allowed, light color variation. Occasionally a very little sapwood permitted 5% per board.	few knots >15mm	Very low	Light variation
Natural Grade or ABC	Clear, healthy and dead repair knots with a diameter >30mm. No open defects and cracks, color variation allowed. Sapwood 15% per board allowed.	Some knots >30mm	Some sap	Allowed
Rustic Natural Grade or ABCD	Healthy and dead knots (filled) with a diameter >50 mm. No open defects and cracks, color variation allowed. Sapwood 30% per board allowed.	Bigger knots >50 mm	Higher sap	Allowed
Wild Rustic Grade or CD	Knots (filled) with a diameter <50 mm and more. Color variation allowed. Sapwood permitted and no end cracks allowed. Displays a traditional vintage look	More knots and fillers	Higher sap content	Allowed
Character Grade or DE	Special characteristic appearance, the unique structure is more pronounced, allows unlimited knots, sound-cracks and extensive color and grain variation. Also expected some, natural or purpose made imperfections - insect marks, rough saw marks, surface deformations.	A lot of knots and cracks	Extra high Sap Content	Most pronounced color variation

Flawless Precision. Timeless Uniformity.

Prime Grade represents the highest visual quality in wood flooring. Also known as A Grade, this premium selection is cut from the center of the log, where the grain is tightest and the color most consistent. The result is a floor that exudes elegance, precision, and a refined natural finish.

Refined Elegance. Subtle Natural Character.

Select Grade—often referred to as AB or High Grade—offers a clean, elegant look with just enough natural detail to preserve authenticity. This is one of the highest visual grades available, ideal for interiors that require a polished and uniform aesthetic.

**ABC Grade**

Balanced Beauty. Subtle Variation. Natural Grade, often referred to as ABC Grade, offers a well-balanced look that blends the authenticity of real wood with a slightly cleaner, more consistent appearance than rustic grades. It's ideal for those who want natural variation without excessive visual texture.

**ABCD Grade**

Natural Rustic Grade—also known as ABCD Grade represents a rich, untamed expression of natural oak. This grade embraces the full spectrum of wood's visual features, delivering a surface that feels authentic, textural, and full of life.

Raw. Bold. Unapologetically natural.

Our Wild Rustic Grade flooring showcases oak in its most expressive and authentic form. This grade allows a virtually limitless number and size of knots, with pronounced features that reveal the full story of the tree's growth.

Embrace the beauty of imperfection with our Character Grade flooring—a bold, expressive choice that celebrates the raw personality of real wood.

This grade features a special characteristic appearance, where the natural structure and grain are richly pronounced. It allows for unlimited healthy knots, sound cracks, and extensive variation in color and texture, making each plank completely unique.

FAQ

What is wood grading in flooring?

Wood grading in flooring refers to how the wood used is classified by the manufacturers based on its appearance. This typically takes into account features like size of knots, the amount of sap present in the wood, and its color variations. The fewer the knots, the lower the sap content, and the more uniform the color, the higher the grade of wood.

What are the different wood grades used in flooring?

There are typically five or six wood grades used in flooring, each with different characteristics and aesthetic qualities. These grades are Prime A or AB Select, ABC Natural or ABCD Rustic Natural, CD Wild Rustic and Character or DE

What are the characteristics of Prime and Select Grade wood flooring?

Prime is the highest clear grade. Select Grade, also known as AB-high grade of wood flooring. It is cut from the center of the log, has a uniform appearance, contains very few knots, and has a low sap content. The color variation is minimal due to the natural quality of the wood, giving it a uniform look.

What is the difference between Natural Grade and Natural Rustic Grade wood flooring?

Natural Grade, often referred to as ABC grade, contains some knots (though less than Rustic Natural grade), some sap, and some color variation. ABCD grade, spots larger knots than Natural, contains more sap, and has more colour variation.

What is the Wild Rustic Grade in wood flooring?

Wild Rustic Grade, also known as CD grade is the lower grade for wood flooring. It displays a larger range of color variation, has more knots and fillers, and contains higher sap content, giving it a traditional vintage look.

What is the Character Grade in wood flooring?

Character Grade, often referred as DE grade is the special antique grade for wood flooring. It displays a larger range of color variation, has more knots and fillers, and contains higher sap content, giving it a special antique look.

ENGINEERED HARDWOOD

Engineered Hardwood Flooring

Our engineered oak hardwood is smart, quality, eco-friendly product from Europe. We specialize in the ecological qualities of hardwood flooring, taking care to ensure clean air in your home and reduce harmful VOCs. Crafted with precision and care in our European factories, it's designed to transform any space into a work of art. With a top layer of genuine European Oak, it brings the natural beauty of wood to the forefront while ensuring strength and resilience.

- ✔ Genuine European Oak top layer for classic charm.
- ✔ A three-layer construction for optimal stability.
- ✔ Precision-engineered with European craftsmanship.
- ✔ Ideal for residential and commercial spaces.
- ✔ Easy installation with tongue and groove system.
- ✔ Finished with eco-friendly natural oils for keeping warm to the touch of nature.

Colors

For the finishing coating of our floors, we use a unique wood protection technology of polymerisation of oil with wood on molecular basis, creating a strong and durable coating, while preserving its natural appearance.

Available in more than 40 shades in standard

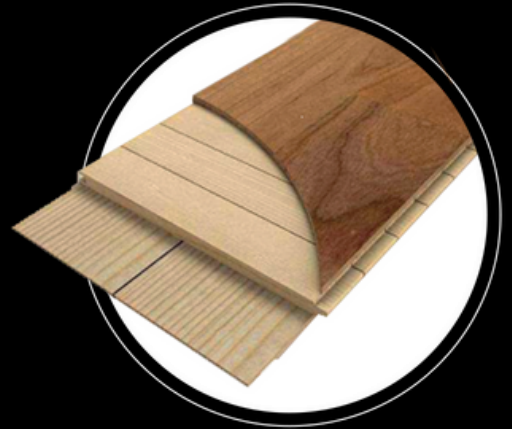

TECHNOLOGIES

3-Layer T&G Engineered Hardwood Flooring

- Premium Stability
- Solid Hardwood Build

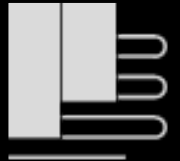

Engineered for Lasting Balance

- Precision 3-layer structure made entirely from hardwood
- Top: European White Oak
- Core: Oak or Pine hardwood
- Base: Oak or Pine

Built for Dimensional Stability

- Oak Core: Highly stable and deformation-resistant
- Sawn Lamella Top Layer: Same texture as solid wood with no internal cracking

Strong, Secure, Silent

- Traditional Tongue & Groove profile
- Four -sided micro bevel
- Zero Formaldehyde — Safe for indoor environments
- Industrial-grade eco polyurethane hot-melt adhesive
- → Moisture-resistant, elastic, no aging or delamination

Versatile Installation Options

- Install below, on, or above grade
- Compatible for heated floor systems
- Install over concrete with adhesive or over wood base with nails
- Suitable for residential & light commercial use

The Art of Color in Wood

ALLINWOOD offers a curated spectrum of engineered hardwood tones—each collection defined by a distinct mood, purpose, and aesthetic.

- **Light & Airy** — **Elysium** captures the essence of serene, pale-toned oak for timeless minimalism.
- **Deep & Bold** — **Eclipse** showcases rich dark hues for dramatic, grounding interiors.
- **Warm & Classic** — **Fairmont** celebrates mid-brown shades, perfect for natural warmth and character.
- **Soft & Subtle** — **Aurum** features elegant beige tones that echo the understated beauty of natural oak.
- **Modern & Cool** — **Moonstone** offers versatile greys, refined and contemporary.
- **Expressive & Vibrant** — **Opulence** introduces brighter tones that bring creativity to the surface.
- **Unrepeatable & Artistic** — **Signature** features one-of-a-kind hues created through proprietary blends of oils, primers, and artisanal craftsmanship.

Each collection is more than a color—it's a design language.

ENGINEERED WOODEN 3D WALL PANELS

WOODEN 3D WALL & CEILING – is a panels that consists of few elements joined together with cut pattern. Our construction of engineered basis gives more stable and reliable; therefore, it has less bending and deformation of wood. The benefits of such panel is multifunctional use where you can join elements to any width. This versatile panel a chic, timeless design pattern, providing a unique 3D visual effect that instantly enhances any space. Our panels allow you to completely personalize your walls. Our 3D panels are an ideal solution for homeowners and interior designers looking to transform living spaces, offices, or commercial establishments.

OUR BENEFITS:

- TIMELESS DESIGN
- MULTIFUNCTIONAL
- USE EASY TO INSTAL
- TONGUE & GROOVE CONNECTION
- EUROPEAN OAK ON TOP
- ECO-FRIENDLY & 100% EUROPE

Four Collections. Endless Possibilities.

Our 3D wall and ceiling panels are available in four curated design collections—each offering its own distinctive character and architectural appeal:

- **Geo Wood** – Clean lines and rhythmic geometry define this modern classic. Perfect for creating bold visual structure in both residential and commercial interiors.
- **Art Lines** – A statement of precision and refinement. This collection emphasizes sharp angles and contemporary pattern work for high-impact design.
- **Waves** – Organic curves and flowing contours bring softness and movement to walls or ceilings, ideal for calming, elegant spaces.
- **Custom** – For projects that demand individuality, our Custom collection offers bespoke patterns, colors, and configurations to bring your unique vision to life.

Each collection is expertly crafted with European Oak, engineered for superior stability, and finished with eco-friendly treatments for healthy, lasting beauty.

Architectural Elegance in 3D

ALLINWOOD's wall and ceiling panels are a bold evolution of natural design—crafted from premium European White Oak and engineered for modern interiors. This exclusive collection features sophisticated 3D reliefs, clean linear slats, and fully customizable patterns that bring depth, warmth, and movement to any surface.

Each panel is designed for seamless installation with tongue-and-groove connections, combining aesthetic refinement with functional ease. Whether used for feature walls, ceilings, or full-room transformations, these panels offer timeless architectural appeal and versatile application.

With eco-friendly finishes, high dimensional stability, and a variety of sizes, textures, and tones, our 3D panels deliver both beauty and performance—ideal for designers and homeowners who value originality and craftsmanship.

**THERMALLY MODIFIED
ENGINEERED HARDWOOD**

ALLINWOOD Thermally Modified Engineered Hardwood

Exceptional stability. Natural durability. Sustainable performance.

We offer Thermally Modified Ash which is the premium class of hardwoods, combining exceptional durability with timeless elegance. Our unique engineered construction uses three layers of thermally modified ash, providing uniform strength and performance throughout the entire plank—far beyond what standard engineered or solid wood can offer.

Crafted through high-temperature treatment, our thermally modified engineered hardwood delivers superior resistance to moisture, warping, and decay — all without the use of chemicals. The process enhances the wood's natural tones and texture, resulting in a refined, stable product ideal for decking, cladding or fencing.

- Eco-conscious – Free from harmful additives and VOCs
- Moisture-resistant – Perfect for challenging environments
- Highly stable – Minimizes expansion and contraction
- Natural look – Rich color and texture that lasts

We provide premium exterior solution - DECKING, CLADDING (SIDING), and FENCING designed with hidden installation system for a clean, luxurious aesthetic.

Available in a variety of species, finishes, and formats to suit modern design and architectural needs.

Benefits:

- *Premium Quality – Thermally Modified Ash is the top-tier hardwood, valued for its strength, beauty, and exclusivity.*
- *Unique Engineered Strength – All three layers are made of thermally modified Ash, giving consistent durability and stability across the entire plank.*
- *With invisible fixing system*
- *Light in weight, tool-friendly*
- *Acoustically and thermally comfortable (e.g. “no hot feet”) compared to synthetic and untreated wood products*
- *Homogeneous color throughout board thickness*
- *Fungal and insect resistance enhanced by the thermal process*
- *Enhanced Durability – Resistant to moisture, decay, and insects, ensuring decades of use.*
- *Dimensional Stability – Minimal expansion and contraction, perfect for any climate.*
- *Versatile Applications – Ideal for decking, cladding, and fencing, bringing premium aesthetics and performance to exterior projects.*
- *Distinctive Elegance – Rich tones and unique grain patterns create a luxurious, one-of-a-kind appearance.*
- *Eco-Friendly Choice – Sustainably produced without chemicals, a responsible alternative to exotic hardwoods.*

Our thermally modified ash in engineered form represents the highest class of wood for exterior applications, combining beauty, unmatched strength, and long-lasting performance.

DECKING

ENGINEERED THERMALLY MODIFIED ASH

DECKING & CLADDING

We provide our own production, crafted in Europe with a focus on high quality and eco-friendly manufacturing standards. Our Thermally Modified Ash in engineered form represents the highest class of wood for exterior applications, combining beauty, unmatched strength, and long-lasting performance. Its exterior solution with a hidden installation profile that creates a flawless surface without visible screws. The result is a sleek, modern look that highlights the natural beauty of the wood.

Using clips of our own production, every board is secured with precision and durability in mind. The system ensures proper spacing, ventilation, and resistance to wear, keeping your deck or cladding beautiful for years to come.

Ecology and safety are at the core of ALLINWOOD. We strive to make products without any harmful substances for planet and people. Our healthy products don't just protect wood, but also protect the health of the professionals working with our products day in, day out and of the end user, who can enjoy a safe, protected home.

Thanks to our revolutionary technology our flooring are 100% safe and 0% VOC without compromising on quality

WHY ARE VOCS HAZARDOUS?

Volatile Organic Compounds (VOCs) are chemicals that evaporate after applying coatings, harming both health and the environment. They can cause allergies, breathing issues, and eye irritation while also contributing to ozone depletion and climate change. Yet, many traditional wood finish manufacturers only reduce VOCs instead of eliminating them. Luckily, we choose to be different.

Eco-Friendly Commitment

We believe in creating healthier living and working environments.

Unlike many competitors who conceal their methods, we transparently prioritize your well-being by using Rubio Monocoat, an eco-friendly Belgian finishing product that is completely free of harmful VOCs

Many conventional products contain formaldehyde, phthalates, and ammonia—chemicals linked to serious health risks, including respiratory illnesses and cancer. Our decision to exclusively use Rubio Monocoat ensures beautiful, durable hardwood floors without exposing your family, employees, or customers to dangerous chemical emissions.

DISCOVER OUR EFFORTS FOR NATURE & PEOPLE

Why We Use Eco-Friendly Oil

A Safer, Smarter Alternative to Varnish

At Allinwood USA, we believe luxury should never come at the cost of your health—or your floor’s long-term performance. That’s why we exclusively use Rubio Monocoat Oil an advanced, plant-based oil finish that offers true sustainability, durability, and zero compromise.

✓ Heal their Living Environments

Many competitors advertise their products as “eco-friendly,” yet still finish their flooring with traditional lacquers—which contain formaldehyde, solvents, and other VOCs. These chemical coatings continue to off-gas for months and pose real health risks, especially for children, pets, and allergy-sensitive individuals. Rubio Monocoat Oil is truly eco-friendly and VOC-free, from day one. It’s 100% safe, non-toxic, and ideal for creating cleaner, healthier indoor spaces.

✓ Effortless Beauty & Maintenance

Unlike varnish, Rubio Monocoat oil bonds at a molecular level with the wood, forming a durable yet breathable finish. Small scuffs or everyday stains? Simply clean and if needed reapply without sanding —no dust, no downtime, no toxic fumes.

✓ Smart Touch-Up System

Maintain your floor’s pristine appearance with user-friendly restoration kits — perfect for busy households and commercial spaces alike. User-friendly restoration kits allow for localized spot treatments, so you don’t have to refinish the entire floor. It’s a smarter, low maintenance way to keep your space looking flawless.

GreenGuard Gold

This label shows that our product is safe for the environment and human health. Products that have achieved GreenGuard Certification are scientifically proven to meet some of the world's most rigorous, third party chemical emissions standards. This helps to reduce indoor air pollution and the risk of chemical exposure, while aiding in the creation of healthier indoor environments.

With the GOLD version, we not only confirm our ecological story and VOC free oils once again, but we also prove that our product can be safely used for schools and healthcare facilities.

Grade A+ indicates the lowest emission and therefore shows that product is safe

Indoor Air Comfort Gold

This label guarantees you, our customer, that our products will continue to meet the high standard you expect of them regarding emissions for years to come.

Eurofins Indoor Air Comfort Gold certification includes more than testing and screening for thousands of chemicals. It includes an internal quality program for processes to ensure that low-emitting products are continuously manufactured. This includes on-site audits, re-testing and certification - together ensuring an extremely high level of reliability in the statement of very low VOC emissions.

The Indoor Air Comfort Gold label complies with the CDPH Section 01350 and M1 odour and ammonia testing. Moreover, the label shows global compliance with the VOC norms of the following certificates:

- CDPH Section 01350
- GreenGuard compliance based on CDPH Section 01350 test results
- LEED outside North America

International Certificates

Interior Cleaning

Rubio Monocoat interior cleaning products are the recommended choice for routine cleaning of your interior Rubio Monocoat finished surfaces. They are specially formulated to be compatible with hardwax oil finishes, offering an effective and safe way to remove dust, dirt, and other surface contaminants without compromising the integrity of the finish.

Surface Care Spray

is the only recommended cleaner for your finished surface. It will remove all dirt and grease thoroughly, without leaving a film or affecting the matte natural look of the wood. It is suitable for both general cleaning and easy cleaning of localized stains.

Surface Care Spray is made by mixing **Rubio Monocoat Soap** with water at ratio of 1:100, respectively

Common Mixing Measurements	
WATER	RMC SOAP
750 milliliter	1/2 tbsp
1 gallon	1.3 fluid oz

CARE AND MAINTENANCE

Tannin Remover

Tannin Remover is a ready-to-use product designed to effectively remove stains and spots on wood surfaces caused by acid and water reactions. This versatile stain remover is perfect for tackling black/tannin stains such as rings or marks left by cans, flower pots, and more.

Universal Soap

Soap for regularly cleaning Universal Soap is a pH-neutral maintenance soap for the regular cleaning of all oiled surfaces. Universal Soap is very concentrated and hence very economical.

Don't worry about the air in your space

Certified 0% VOC

Oil Plus 2C is eco-friendly and sustainable, featuring a linseed oil base and multiple third-party certifications, including GREENGUARD Gold, 0% VOC, Food Safe, and Toy Safety. The 100% solid formulation is solvent-free and VOC-free and boasts an exceptionally high spread rate.

YOU DO NOT NEED TO SAND FOR RENOVATION

Interior Maintenance

Rubio Monocoat interior maintenance products are used for performing as needed maintenance to your interior Rubio Monocoat finished wood surfaces. They are specially formulated to remove stains, renew, and refresh the surface, restoring the look and protection it had when freshly finished.

Looking to reactivate and renew your surface?

Check out Renew.

- Can be applied several times a year at certain areas.
- Easy for homeowners to use.
- Non-pigmented.

RENOVATION

The trick to the renovation process is a light abrasion that opens the initially applied Oil Plus 2C finish. This means a renovation can be performed without requiring a full-on re-sand. Once abraded and cleaned, apply Oil Plus 2C the same way as an initial application.

During application, only the areas that require color restoration will accept color while the remaining areas will simply be refreshed in appearance and protection.

MAINTENANCE

Renew

is a ready-to-use product that refreshes, restores and protects surfaces treated with Rubio Monocoat Oils. Renew should be used when the surface feels too dry or rough, or when the finish has worn down due to heavy use.

Note: If color restoration is necessary perform a 2c Renovation Oil Plus 2C in the original color with which the surface area was treated.

Ideal for surfaces that feel too dry or rough, or when the finish has worn down due to heavy use, Renew brings your wood back to a freshly oiled state. If you want have more sheen you can apply Universal Maintenance Oil increases the sheen from matte to a velvet sheen.

A close-up photograph of a dark wood surface, showing a prominent diagonal grain pattern. The wood is a deep, rich brown color, with lighter, golden-brown lines running diagonally across the frame, creating a textured and elegant appearance. The lighting highlights the natural grain of the wood, emphasizing its organic structure.
